## DESTINATION

A place to work where you will feel comfortable, challenged and highly regarded.

You would like to learn more about typical jobs? Find answers [here](#).

**Working for HE Space...**

HE Space colleague, Aline Decadi, is working at ESA in Paris as a Dependability and Safety Engineer in the Launcher Department. She has presented her first paper regarding the Safety engineering for Deep-Space Exploration at the IAASS (Space Safety) conference 6 months ago. Constructive feedback from the World Safety Community gave her very useful recommendations to go a step further and propose global Safety synergies for Space Exploration regulations by creating a bridge with the Aviation standards. HE Space offered her the opportunity to go to the IAC (International Astronautical Congress) in Guadalajara, Mexico. Aline presented her second paper in front of experts from all over the world dealing with Safety requirements for future human rating Space Exploration to Mars and beyond. We are proud of her work and would like to share [her article](#) .
