### #ScienceBeyondFiction

HE Space is supporting the first TEDxESA event, which will take place on 11 November 2015 at ESTEC, ESA's engineering and technical heart, in Noordwijk, the Netherlands.

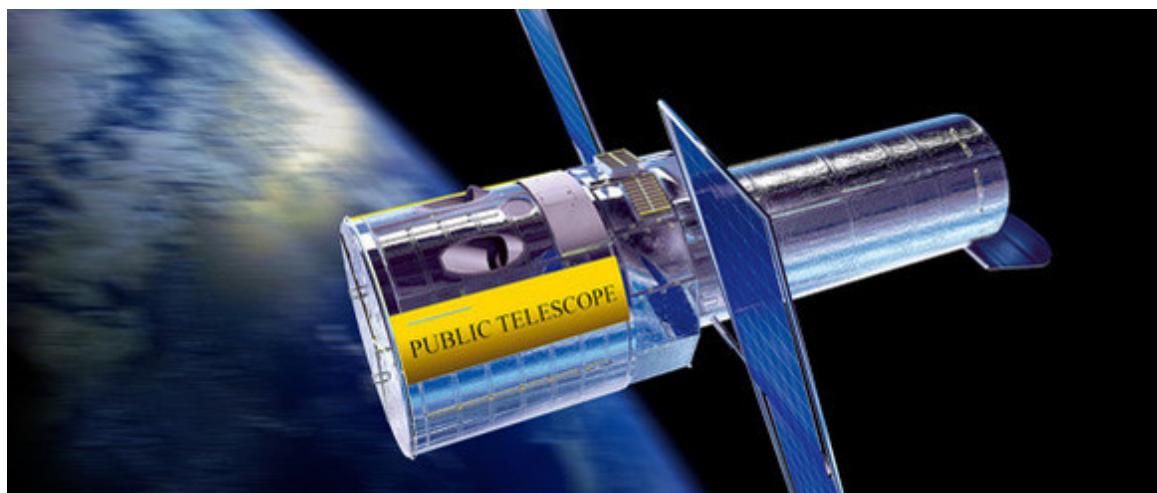

The theme of the TEDxESA 2015 event will be Science Beyond Fiction.

HE Space founder, owner and former Apollo astronaut trainer Scott Millican will be one of the TEDxESA speakers. Scott has been in the space business for over 40 years. He was part of the Houston team which helped rescue Apollo 13 when a malfunctioning oxygen tank disaster halfway to the moon.

TED stands for Technology, Entertainment, Design — three broad subject areas that are collectively shaping our world. But a TED conference is broader still, showcasing important ideas from any discipline, and exploring how they all connect.

Find out [more](#) about Scott Millican and the other TEDxESA speakers!

# A Spacetelescope for everyone

Since supporting the first StartUp Weekend Space this year in April in Bremen, HE Space fosters innovative StartUp's in the Space sector, with the aim to turn business ideas into reality.

That's why we did not hesitate to encourage a new wonderful initiative, which is still in design phase: Astrofactum will build a public spacetelescope which will give access to astronomy observations without disturbance of the Earth atmosphere, to scientists, amateur astronomers and students.

The spacetelescope is scheduled for launch in 2019 and should start operations in 2020.

HE Space employee Alessio Paoletti (on the picture above), working as an AOCS engineer at Airbus D&S in Friedrichshafen, is providing support for orbit selection, fuel budgeting, and pointing stability optimization strategy. For more information check out the [website](#).

## Space Camps- lift off!

Recently HE Space organised the first space camp in Bremen for pupils from 11-14 years old eager to discover space. This space camp offers us at HE Space the chance to pass on our passion for space to the wider community. In cooperation with the DLR Schoollab in Bremen a varied programme was offered. The pupils learned how rockets can fly into space, and why experiments in space are so different from on Earth. They also had a chance to look behind the scenes at Airbus, OHB, ZARM and DLR.

As part of our HE Space Children's Foundation endeavour to support projects that aim at the enhancement of education, we initiated a space camp in Israel at the same time as

the 66th International Astronautical Congress (IAC) in October. Pupils in Israel had the chance to work with space experts. The camp was locally organised in cooperation with Hebrew University of Jerusalem and the Youth Center for Advanced Studies who have lots of experience. We hope that giving this opportunity to the younger generation prepares them for future challenges. Hopefully we sparked their interest and some of these talented pupils end up in the space sector.

## What's cooking in our recruiter's kitchen?

When you compare an application process for a job with a recipe for a delicious dish, it would sound like that:

Our recruiters are cooking a very international dish. One of a kind! If you cook it a few times you will never get the same taste. We call it HE's BOURGUIGNON.

What we need to put into the mix are: some vegetables (databases), different spices to make it taste good (that would include you and all our network) and a juicy cut of meat (knowledge).

We put it all into the pot and leave to simmer. However we don't want it undercooked (the right experience but slightly too little) or too salty (overqualified and would be bored in this position). Obviously, we want HE's BOURGUIGNON to be perfect! We are missing one secret ingredient that would make it that way. Do you know him or her?

Find the recipe!
