

HE Space is a successful international space company. For nearly 40 years, we have been supporting our customers with qualified experts in the field of engineering, science and administration. We are currently looking for a System engineer to support our customer in France.

System engineer

Key Tasks and Responsibilities

As part of the dynamic new space company, you will have the following responsibilities:

- Synthesize the outcomes of the mission analysis and system design.
- Elaborate the system Concept of Operations.
- Specify system operations, define the operations team, organisation, deployment logic, and training needs.
- System external and internal interfaces.
- Defines the overall the end-to-end system tests specification and verification process.
- Analyze the technical, development and industrial proposal issued by the ground system subcontractors and the space segment ones.
- Support the project manager during negotiation of the subcontracts for system performance and consistency.
- Support the project manager for follow up of the subcontractor during the overall development process (meeting, reviews, documentation analysis, budgets, industrial matters, quality, assembly, tests...).
- Proactive participation in the project team work in order to guarantee that the subcontractors will deliver a product totally conform to the specification, the SOW and the delivery time.
- Establishing relevant budgets and synthesis.

Skills & Experience

You will have the following qualifications and relevant experience:

- 10 years of experience in the field (EO satellite system), at both system and subsystems level;
- Good experience in EO ground systems design, development, test, and deployment;
- Experience in operations design;
- Fluency in English is mandatory; knowledge of French language is an advantage.
